

Preclinical Immuno-Monitoring platform

The immuno-monitoring platform for preclinical studies leverages on the scientific expertise in Immunology supported by innovative technologies active in IMI and in the CER group (www.cergroup.be) :

flow cytometry, multiplex assay, immunogenomics, qPCR and cell-based assay

The platform is integrated in a quality management system, from pure exploratory to GLP service level. The goal of the platform is to meet your requirements by applying flexible and custom-made solution from feasibility to validation and process/protocol optimization.
